SUMMARY

Product Owner / Business Analyst with hands-on experience translating ambiguous operational needs into structured workflows, business rules, approval flows, and management-facing systems. Experienced across requirement discovery, stakeholder alignment, process mapping, UAT, delivery coordination, and iterative product improvement. Previously acted as de facto product owner for internal enterprise platforms at Kalbe Nutritionals, bridging business stakeholders and technical implementation without formal product or BA layers.

EXPERIENCE

Product Owner / Business Analyst

PT Sanghiang Perkasa, Kalbe Nutritionals — Contract · Nov 2024 – May 2026 · Jakarta, Indonesia

- Managed end-to-end product discovery and delivery activities for two internal platforms, covering business need identification, requirement clarification, workflow definition, stakeholder validation, UAT support, and iterative improvement.
- Elicited and documented KPI business requirements from manual Excel and SharePoint workflows, identifying consolidation bottlenecks, ownership ambiguities, and data accountability gaps — translating findings into actionable system specifications.
- Collaborated directly with Management System stakeholders to validate requirements, discuss solution trade-offs, and align system behavior with real operational constraints — without a PM or senior BA as intermediary.
- Prioritized features based on direct operational feedback: starting with core submission-approval workflow, iterating to add under-target monitoring, audit trail, Best Estimate, and Trend PDCA Analysis as needs evolved.
- Drove platform adoption through user-feedback-driven UI/UX iteration — evolving MsDigi from a data entry tool into a Decision Support System actively used in monthly management evaluation.
- Designed an authorization model separating authentication (IT-controlled) from permission management (Management System-controlled) — reducing operational dependency on IT for day-to-day access changes.
- Navigated organizational constraints including IT gatekeeping, cross-division budget ownership conflicts, and compressed UAT timelines — maintaining delivery progress across two platforms simultaneously.
- Supported stakeholder-facing materials and product positioning for MsDigi's Board-level presentation.

PROJECTS

Ms Digi — KPI Governance & Performance Management Platform

Performance visibility · KPI governance · PDCA · Automated aggregation · Management review

- Designed and built an integrated KPI governance platform consolidating monthly achievement input, validation, approval, automated aggregation, under-target monitoring, PDCA trend analysis, reminders, audit trail, and management dashboards into one application.
- Supported performance management for **71 KPIs** across Plant/Manufacturing functions and multiple departments/divisions/entities.
- Defined system scope, user roles, approval flows, and data governance rules from scratch — using only an Excel spreadsheet as the initial business input.
- Turned fragmented Excel-based KPI coordination into an operational source of truth recognized by Management System users and division leadership for monthly evaluation and reporting.
- Iteratively improved the platform based on direct user feedback — adding Best Estimate, Trend PDCA Analysis, and delegated permission management to address evolving operational needs.

Ecalmas — Calibration Management System

Legacy reconstruction · .NET 10 · Role-based Access · Embedded Analytics · UAT delivered in 1 month

- Helped gather requirement mapping and process reconstruction of a legacy calibration system — preserved workflow fidelity while modernizing the system foundation, reaching UAT within one month.
- Replaced an existing Tableau implementation with an embedded analytics dashboard after identifying the usage covered only basic aggregations the application layer could already handle.

The Strategist's Ledger — Federated KPI PoC

- Personal initiative exploring federated KPI architecture for cross-department financial metrics (Saving Cost, OP Contribution, Top Line Growth, COGS Ratio) — initiated as a proof-of-concept following observations of reporting fragmentation across divisions at Kalbe.

SKILLS

Product & Ownership: Product lifecycle management, backlog prioritization, requirement elicitation, stakeholder alignment, user story writing, iterative delivery, product thinking

Business Analysis: Process mapping, gap analysis, workflow design, business rules documentation, system specification, data governance, UAT facilitation

Systems: System decomposition, RBAC design, multi-tenant architecture, service boundary design, auditability, Clean Architecture

Technical: .NET, C#, SQL Server, JavaScript, React, Next.js, Redis, Docker, Jenkins

EDUCATION

Universitas Bina Sarana Informatika

Bachelor's Degree in Information Systems · GPA: 3.72 / 4.00 · 2021 – 2025 · Jakarta, Indonesia
